

The Octasound Advantage — Achieving Clarity

In Large Spaces

4 discrete horns for clarity and projection

3/4" moisture resistant wood composite enclosure

Rugged metal grille for when the going gets rough

Woofer balances the horns for a rich full sound

Octasound 360° Models

The Horn Advantage

Put these four players in the same room and we all know which one will have the loudest sound—the trumpet player. At the back of a crowded room you'll still be able to hear every note he plays. Octasound speakers take advantage of the incredible efficiency of horns in projecting the

mids and highs, utilizing not one but four horns to spread the sound. Add a downward facing woofer to round out the bottom and now you're hearing Octasound. Use them on your next gymnasium or arena install and you're sure to hear something extra sweet — your client singing your praises!
